MAN Engines and the British luxury yacht manufacturer Sunseeker are continuing their long-standing cooperation and expanding it into a strategic partnership. With the new agreement, Sunseeker is relying on MAN Engines as a strategic partner for the motorisation of its yachts in the long term. The decisive factors for this are the cooperation that has proven itself over many years and an engine portfolio that opens up a wide range of possibilities for Sunseeker in the development of existing and future yacht generations. The new agreement covers the use of MAN engines in numerous existing and future Sunseeker yacht series. With its engine portfolio ranging from in-line six-cylinder to V8 engines to the powerful V12, MAN Engines equips the yachts in a power range of 800 to 2,200 hp (588 to 1,618 kW), thus enabling the use of MAN drives across different yacht classes.

"Sunseeker and MAN Engines are linked by a cooperation that has grown successfully over many years. Decisive for the continuation of our partnership are not only our products, but also the trust and well-established processes between the two companies. With our current and future engine portfolio, we can support Sunseeker in the further development of a wide variety of yacht concepts," says Daniel Strucks, Head of MAN Engines.

For example, MAN engines are already being used across the popular Predator, Manhattan, Yacht & Ocean ranges. In the future, they will also be found in the

MAN Truck & Bus is one of Europe's leading commercial vehicle manufacturers and providers of transport solutions with an annual sales revenue of around 14.1 billion euros (2025). The company's product portfolio includes trucks, buses and coaches with diesel and zero-emission drives, vans, diesel and gas engines along with services related to passenger and cargo transport. MAN Truck & Bus is a company of TRATON GROUP and employs some 32,000 people worldwide.

new models of the Manhattan 94 and 100 Yacht as well as the entry level engine option for future superyachts.

The MAN V12X plays a special role for larger yacht models. With an output of up to 2,200 hp (1,618 kW), the twelve-cylinder engine with a displacement of 30 litres expands the available power range and opens up additional possibilities for Sunseeker. The MAN V12X thus supports the British yacht builder's ambitions to further expand its presence in the superyacht segment, which is important for Sunseeker.

The latest in-line six-cylinder engine from MAN Engines is also already part of future product planning. The MAN i6X, which was presented at the Cannes Yachting Festival, is intended for use in product premieres from 2028. It will be used in new Sunseeker models as well as in existing model series, which will be re-engined with it.

“MAN has been a trusted partner of Sunseeker for more than two decades and this renewed agreement reflects the strength of that relationship. Over the years we've delivered hundreds of yachts together and, importantly, we've developed a real understanding of what our customers expect from a premium propulsion package. What excites us most is the opportunity ahead. From the Manhattan 94 and 100 Yacht through to future superyacht projects, MAN's expanding engine portfolio gives us greater flexibility, more performance options and access to exciting new technologies such as the V12X and the forthcoming i6X. That ultimately allows us to continue delivering the innovation, capability and ownership experience our customers expect from Sunseeker," says Scott Millar, CEO of Sunseeker.

Even after the delivery of a yacht with MAN engines, Sunseeker customers benefit from the international presence of MAN Engines. For the maintenance and service of the engines, the global service network with over 500 service bases at all important ports is at their disposal. In this way, MAN ensures comprehensive support for its engines, especially in the regions relevant to the yacht market.

With the extension of their cooperation, Sunseeker and MAN Engines are creating the basis for further joint yacht projects.
